

Welcome to the exciting new world of temporal displacement!

If this is your first experience violating the laws of nature, you may be just a bit anxious. But don't worry. If you follow these few time-traveling tips there's practically no chance you'll create a chrono-singularity and cause all the particles in the universe to explode simultaneously at the speed of light.

Disclaimers

Time travel is intended for entertainment purposes only. Consult a qualified theoretical physicist. Possible side effects include nausea, dizziness, sense of déjà vu, vomiting, causing an HRA (horrific robot apocalypse), and/or a sense of déjà vu. Do not ingest the portable tachyon detector. Past timelines are not a guarantee of future results. Use caution when operating spaceships, dinosaurs, or other heavy machinery. Void where prohibited by laws of nature.
