

Circle one:

Government Scientist

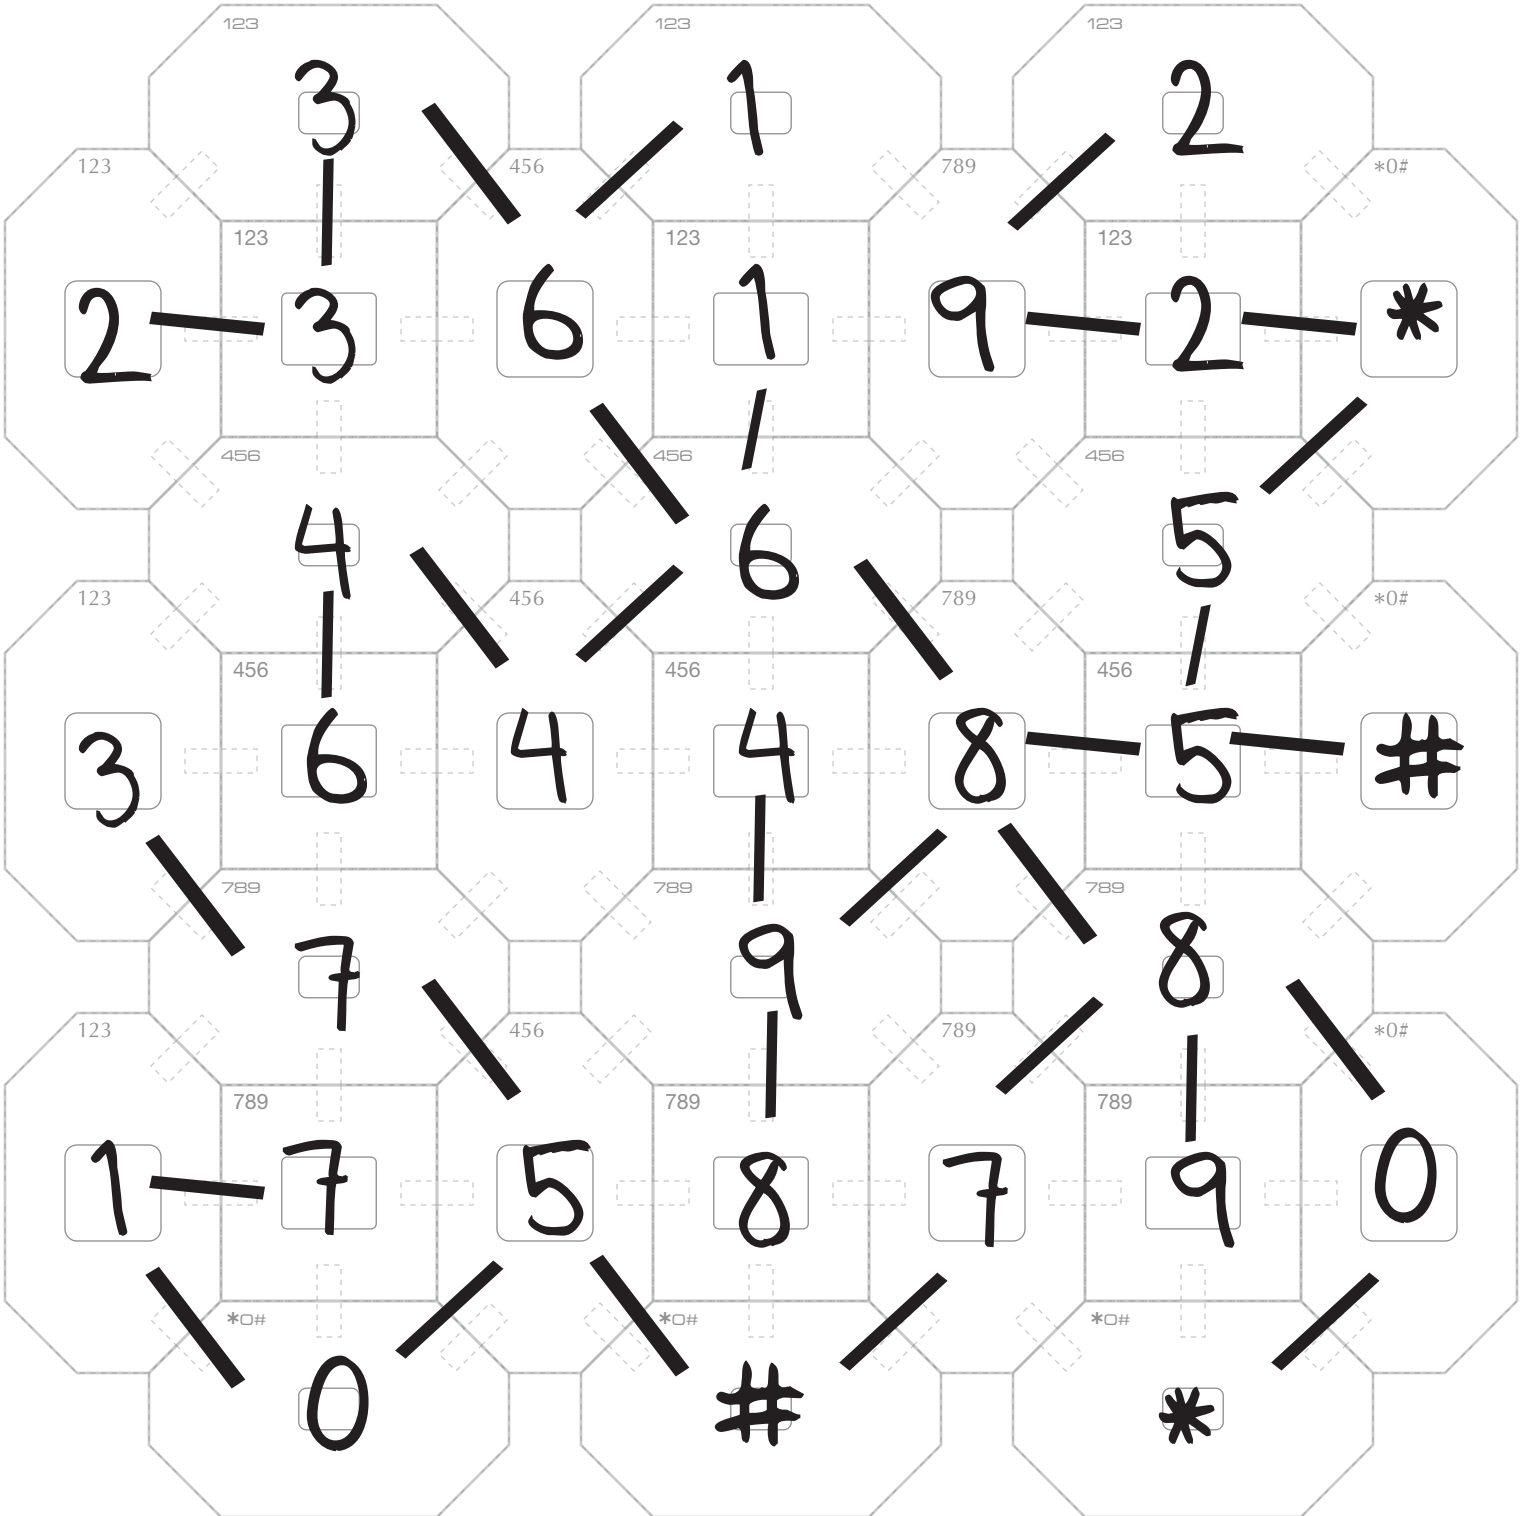

Journalist Investor

Organization name:

Sample Sheet (of CRAP)

Keypad Number:

34

* Each key can only be in one of three positions, based on its color and key value. Similarly, each position can only hold three possible keys

* See the small labels in the empty diagram above for the three keys that can be in that position.

* All keys are networked together such that:

* Between two touching keys, there is either a direct connection or no direct connection.

* Between any two keys, there is exactly one route between them, which may go through other keys (that is, there are no loops, and everything is indirectly connected).

* If using a kit, please use the small rods to indicate the connections.

SOLVED!!!

i am awesome
